

Tungsten Replicator Master Class

Basic: Replicator Maintenance

Chris Parker

VP of Customer Success, EMEA

Topics

In this short course, we will

- Discuss Maintenance Operations
 - Start and stop the software
 - Upgrading Tungsten Software
 - Updating parameters

Stop/Start

- Control the Java Process
- `replicator [start|stop|restart|status]`
- `deployall` script to install against `systemctl` services

Tungsten Upgrades

- Download and extract software on EVERY node
- Check Release Notes!
- On each node in turn, issue:
 - `tools/tpm validate-update`
 - `tools/tpm update --replace-release`

Change Properties

- Check Documentation for specific details on each property
- Update the ini accordingly
- Issue ``tpm update``
- Some properties may require additional pre/post configuration, for example
 - Changing THL Location
 - Changing Enabling/Disabling SSL
 - Adding certain filters

Summary

What we have learnt today

- Start/stop the software
- Upgraded Tungsten Software
- Update parameters

Next Steps

In the next session we will

- Discuss Monitoring & Troubleshooting
 - Handling (and recovering from) Failures
 - Skipping Transactions
 - Finding and understanding Log Files
 - Scripts for Monitoring
 - ...and more

Thank you for listening
